Submitted (DEC-1998) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN. ACTIVATED BY
CLEAVAGE AND SECRETED (By similarity).
-!- TISSUE SPECIFICITY: EXPRESSED MAINLY IN PROSTATE AND KIDNEY.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.
-!- SIMILARITY: Contains 1 SRCR domain.
-!- SIMILARITY: Contains 1 LDL-receptor class A domain.

Torres-Rosado A., O'Shea K.S., Tsuji A., Chou S.H., Kurachi K.;
"Hepsin, a putative cell-surface serine protease, is required for mammalian cell growth.";
Proc. Natl. Acad. Sci. U.S.A. 90:7181-7187(1993).
-!- FUNCTION: Plays an essential role in cell growth and maintenance
                                                                                                                                                                                               of cell morphology.
-!- SUBCELLULAR LOCATION: Type II membrane protein.
-!- TISSUE SPECIFICITY: Present in most tissues, with the highest level in liver.
"Hepsin, a cell membrane-associated protease. Characterization, tissue distribution, and gene localization.";
J. Biol. Chem. 266:16948-16953(1991).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             83;

"Spinesin/TMPRSS5, a novel transmembrane serine p human spinal cord.";
J. Biol. Chem. 277:6806-6812(2002).
-!- SUBCELLULAR LOCATION: Type II membrane protei
-!- TISSUE SPECIFICITY: Brain-specific. Predomina neurons, in their axons, and at the synapses spinal cord.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI.
-!- SIMILARITY: Contains 1 SRCR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                151;

I con the mucous membrane independently of or in cooperation with other substances in airway mucous or bronchial secretions.

I chalyTIC ACTIVITY: Preferentially of or in cooperation with other substances at the Pl position of certain peptides, cleaving Boc-Phe-Ser-Arg-4-methylcoumaryl-7-amide most efficiently and having an optimum pH of 8.6 with this substrate.

I lucrophosphate, leupeptin, antipain, aprotinin, and soybean trypsin inhibitor at 10 microM.

I rypsin inhibitor at 10 microM.

I SUBCHILULAR LOCATION: TYPE II MEMBRANE PROTEIN. ACTIVATED BY CLEAVAGE AND SECRETED.

I TISSUE SPECIFICITY: Located in the cells of the submucosal serous

-!- SUBCELLULAR LOCATION: Type II membrane protein (Probable).

-!- PTM: THE CHAINS ARE DERIVED FROM A SINGLE PRECURSOR THAT IS CLEAVED BY A TRYPSIN-LIKE PROTEASE (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.

-!- SIMILARITY: Contains 2 LDL-receptor class A domains.

-!- SIMILARITY: Contains 1 SEA domain.

-!- SIMILARITY: Contains 1 SEA domain.

-!- SIMILARITY: Contains 1 SRCR domain.

-!- SIMILARITY: Contains 1 MAM domain.
